

FaxFinder FFX50 Series

The FaxFinder® fax server has been the most costeffective, turnkey solution on the market for years. The FaxFinder has traditionally been tied to a specific piece of hardware, built on a specific Linux OS kernel. Modern security, feature and other considerations now require a more robust, scalable, feature-rich and secure fax server solutions.

Built to run on Window Servers operations systems, the FaxFinder FFX50 Series fax server software can now be deployed on virtual machines. Organizations preferring to segregate mission-critical applications on separate hardware also still have the option of purchasing a dedicated appliance designed and manufactured by MultiTech.

KEY BENEFITS

- Centralize fax operations
- Lower the cost of existing fax operations
- Comply with industry-specific initiatives
- Integrate fax into existing business applications
- Interoperable with a variety of telephone systems
- Cloud transport ready
- Virtual Deployments
- Disaster Recovery Options
- Hardware independent

Why Fax? Compliance.

The continued use of fax within organizations both large and small is due to compliance surrounding sensitive, private and mission-critical documents. Globalization and the need for timely and accurate reporting of financial information have created new regulations regarding document retrieval and retention requirements. Businesses must invest in robust fax solutions, email archiving and document management systems in order to comply with new, evolving regulations.

The logical first step to achieve compliance is to remove fax machines. A fax machine by itself cannot prove who sent a document or what was actually sent. The FaxFinder FFX50 Series new features make this possible through enabling specific users to send and receive faxes, while new archiving and audit processes keep a record of every fax transaction that has taken place.

FaxFinder FFX50 Series Highlights

Deployment Options

The FaxFinder® FFX50 Series fax server offers several deployment options designed to meet the needs of different organizations.

Turnkey Appliance: Designed for organizations that prefer to keep critical applications on dedicated hardware, FFX50-HW-X bundles include a fully licensed X86 Windows Server with FFX50 software preinstalled.

Virtual Server: FFX50-X bundles are designed to be installed into pre-existing virtual environments where organizations prefer not to manage more physical hardware.

Administration & Management

The FaxFinder® FFX50 Series fax server offers different ways of managing the server and users.

- Add and manage users using Active Directory
- New web-based UI allows for easy management of users and settings
- Remote management possible through additional software
- Simple inbound routing configuration to multiple destinations
- Optional FFX50 monitoring tool available

Fax Retention

Built-in document tracking, searching and archiving of faxes. Automatic fax archiving stores all inbound and outbound faxes. Purge options available. Fax images are stored using RSA 256-bit encryption.

Enhanced UI

The redesigned FaxFinder user/admin interface enables users to easily change fax settings, default cover pages, user information, customize address books and more. All sent & received fax images are also easily accessible in the web-based user/admin interface, as well as real time status of active fax jobs.

Scalability

The FaxFinder® FFX50 Series fax server can be scaled to a total of 24 channels through licensing unlocks (FFX50-CHANNEL-2).

For organizations requiring more than 24 channels, contact the FaxFinder team to discuss a custom-built FaxFinder solution designed to meet the required scale.

Web Service Architecture

Legacy computer fax products are very much client-dependent and difficult to support. FFX50 conforms to the N-Tier and web service paradigm, allowing for scalability and fault tolerance with distributed processing.

Security & Monitoring

Enhanced security design at the user level, dealing with permissions related to sending messages and a manager fax approval restriction. Superior audit trails enabling manager to audit and supervise all actions.

Multi-Tenant Design

The domain model within FFX50 enables the propagation of inherited user and system properties within Organizational Units or Child Domains, which simplifies the administration of system cover pages, addresses, etc. This design also mirrors AD and NDS enterprise directory structures.

Integration

FaxFinder allows for integration with third party applications through API (XML over HTTPS). Almost any application is compatible. SOAP or RESTful API integration options are available.

Interoperability

Leveraging XCAPI IP drivers, the FaxFinder FFX50 Series is compatible with a wide range of telephony systems and carriers. For a complete list of compatible systems and services, please contact the FaxFinder team.

FaxFinder FFX50 FFX40 Feature Comparison

With the release of the FaxFinder FFX50 Series, FaxFinder solutions are now much more adaptable to different customer requirements than previous generations provided. In addition to now being deployable on a virtual machine, the FaxFinder FFX50 Series provides more options for sending, receiving, customizations, etc. Whereas previous generation FaxFinders had no upgrade path, FFX50 allows for smoother migrations to future releases.

FaxFinder FFX50 Ordering Information

The FaxFinder® fax server has been available through MultiTech's distribution channel for years and certain FaxFinder FFX50 SKUs and bundles continue to be orderable through those channels. However, due to customization options, specific services, etc, certain SKUs/bundles/add-ons are only available direct through the FaxFinder team or select, authorized partners.

	FaxFinder FFX50 Series Bundles (includes software & channel licensing, 1st year support, basic installation service)		
Part Number	Description	FF Authorized	Distribution
FFX50-2	FaxFinder X50 Series 2 Channel VM Bundle - Standard Edition (etherFAX/FoIP/Analog) Included: software & channel licensing, 1st year	0	0
FFX50-4	support & maintenance, basic installation. Not Included: OS License. FaxFinder X50 Series 4 Channel VM Bundle - Standard Edition (etherFAX/FoIP/Analog) Included: software & channel licensing, 1st year support & maintenance, basic installation. Not Included: OS License.		
FFX50-8	FaxFinder X50 Series 8 Channel VM Bundle - Enterprise Edition (etherFAX/FoIP/Analog) Included: software & channel licensing, 1st year

FFX50 Server Minimum System Requirements

Version 1.0

Hardware

- CPU: 1.6ghz 64-bit processor (2 or more cores)
- Memory/RAM: 4GB
- Disk Space: 20GB (additional disk space required for storing fax images)
- At least one of the following must be present:
- For Analog: AudioCodes Media
 Gateway MP11x (4 or 8 port models)
- For FoIP: XCAPI driver (supports both T.38 & G.711)
- For etherFAX: active account credentials

Optional Dedicated Appliance

- Multi-Tech Systems, Inc. manufactured
- CPU: 1.6GHz 64-bit processor (4 cores)
- Memory/RAM: 8GB
- Drive: 500GB SSD
- For more details, visit www.faxfinder.net/hardware

Operating System Platform

- Bare metal, licensed Windows Server 2016 or Windows Server 2019
 Microsoft .NET 4.7x (installed during installation/configuration process)
- VMware or Hyper-V virtual machine with Windows Server 2016 or Windows Server 2019

Operating System - Configuration Recommendation

- Fresh installation (not an OS upgrade)
- Static or DHCP reserved IP address
- Prefer that the FaxFinder server is not joined to the Domain until after the installation is completed if it is joined to the Domain then NO GPOs applied
- Prefer that FaxFinder is on a standalone server, no other software loaded on the server
- CANNOT BE LOADED ON THE SAME SERVER AS MICROSOFT EXCHANGE SERVER this causes conflicts within IIS
- The FaxFinder directory, and all sub directories, must be excluded from any virus scan software
- UAC disabled

Client Software Requirements

Microsoft Internet Explorer 11.x, Chrome, Firefox or Safari

FFX50 Server Minimum System Requirements

Additional Configuration Requirements

Features:

- .NET Framework 3.5 Features Required
 - .NET Framework 3.5 (Includes .Net 2.0 and 3.0) - Required
 - HTTP Activation Required
 - Non-HTTP Activation Required
- .NET Framework 4.5 Features Required
 - .NET Framework 4.5 Required
 - ASP.NET 4.5 Required
 - WCF Services Required
 - HTTP Activation Required
 - TCP Port Sharing Required
- Remote Server Administration Tools Required
 - Feature Administration Tools -Required
 - SMTP Server Tools Required
- SMTP Server Required
- Telnet Client Required
- Windows Process Activation Service Required
 - Process Model Required
 - .NET Environment 3.5 Required
 - Configuration APIs Required

Need Something Custom?

Contact the FaxFinder team to discuss our professional services offerings. The FaxFinder FFX50 Series is an extremely flexible platform that can go beyond what our standard FaxFinder offering can provide.

Server Roles:

- Web Server (IIS) Required
 - Web Server Required
 - Common HTTP Features Required
 - Default Document Required
 - Directory Browsing Required
 - HTTP Errors Required
 - Static Content Required
 - Health And Diagnostics Required
 - HTTP Logging Required
 - ODBC Logging Required
 - Performance Required
 - Static Content Compression Required
 - Security Required
 - Request Filtering Required
 - Basic Authentication Required
 - Windows Authentication Required
 - FTP Server Required
 - FTP Service Required
 - Management Tools Required
 - IIS Management Console Required
 - IIS 6 Management Compatibility
 Required
 - IIS 6 Metabase Compatibility
 Required
 - IIS 6 Management Console Required
 - IIS Management Scripts and Tools - Required
